

## **ListView Control in Asp.Net**

It is extremely flexible control just like GridView. It can be used to display, edit, delete, select, paging and sorting through database.

- ✓ It is a data bound control used to display data from the associated data source. The ListView control enables a developer to display data in any format using template and styles.
- ✓ Excellent customization and extensibility features.
- ✓ We can use it to insert new data into a database.
- ✓ It is entirely Template driven.
